Ind RDE Index Error

This points to a problem with the daily CDX files. To resolve these errors and allow the site to post, simply do the following after a backup has been completed successfully:

1. From your Digital Dining CD copy all *mmddy.cdx (template) files from the Initdata folder.
2. Place them into a work area ('work' area where you can rename these files without overwriting anything) and remove the Read Only attributes from each file.
3. Rename each file to have the date of the Credit Card batch you are attempting to post.

Example: March 30, 2001...CDmmddy.cdx => CD033001.cdx

Place each of these files into the correct folder, by following the first 2 letters of each daily file name and match them up with the daily subfolder name.

4. Run a Repair Daily Files from Backoffice.
