

I am not using the default database or we have modified the database. I'm getting an error that my table has too many fields.

If you have a version of IVIS Plus prior to version 2.33 32 bit, and your tables, queries, etc. exceed a total of 100 this message will appear. This often happens with FoxPro databases. You can delete the number of tables, queries, etc. or contact your ID America Sales Representative and request an upgrade for your version of IVIS Plus.
