

I want to use IVIS Plus to create and print badges on multiple workstations. What software do I need to have loaded?

You will need IVIS Plus software at all stations requiring printing capabilities as well as a Sentinel key attached to each PC accessing the software. Also, be sure that you have the printer drivers loaded on all PC's that will be printing badges.

It would be a good idea to have the printer named the same on all of the machines. That way you only need to create the card designs on one machine and they will work on all of the workstations.
