

Can images be acquired from Digital Cameras?

Most digital cameras are supported through their TWAIN interface. But, for some it might be necessary to manually take the picture and then transfer it to VSC2 through TWAIN. For others, the picture can be taken from the PC through several procedures and mouse clicks.

For many Kodak digital cameras (mostly the DC model line) and Canon PowerShot models, VSC2 can take the picture and transfer it automatically to the program through a single click option.
