

## Setup of Multiple Cash Drawers on 1 Printer

How to setup a multiple Cash drawer in the Windows product. The site has one register and one printer. They want the cash drawers to be delegated by staff.

1. Two new printer definitions for the two cash drawers will need to be set up, and two printer device types, one with the firing code for drawer one, and the second with the firing code for drawer two.
2. The register definition must be set to use multiple drawers in the "Printers" tab.
3. The cash drawer must be set to fire by the staff which is setup in the Misc >> Options >> Misc Tab.

Note: A Y-cable is needed to split from the printer to the individual cash drawers.
