

Can IVIS Plus run on the same PC I use to manage access control with Series 9000 or IDentiPASS?

It is recommended that separate PC's be used to run IVIS Plus and Series 9000 or IDentiPASS. While technically it is possible to run both systems on the same PC, your access system will not run as efficiently as it should. This is because digital imaging requires much of the system's resources to print badges. Badge printing may impede notification of access violations.
