

I can print from Windows just fine, however my card designs will not print. Where could I look to find the problem?

You can look for the problem in two places:

1. Please check the defined printers to make sure your printer is listed there. Just click on **edit** and **printer setup**. If your printer is not listed, make sure it has been installed.
2. Check your card designs to make sure the printer is attached to that card design.
