

When I go to my "IN CAMERA" view in IVIS Plus, I either get an image of someone that is no longer in the camera, or I get a stack overflow!

What am I doing wrong?

This is caused by corruption in the "THUMBS.DAT" file. It is located in your root IVIS Plus directory. Deleting this file will cure the problem and allow IVIS to recreate it.

Example: "C:\IVIS500\THUMBS.DAT" would be the location for the IVIS Plus 500.
